

SUPPLEMENTARY MATERIAL

Supplementary Figure 1. MEK/ERK suppression decreases p38 MAPK phosphorylation, but does not change AKT (Ser473) phosphorylation. Western-blot analysis of AKT (Ser473) phosphorylation and p38 (Thr180/Tyr182) phosphorylation after treatment with inhibitors. Cells were cultivated for the indicated time and then lysed and processed to Western-blotting in 12% gel. Numbers below present densitometry of bands.
