

SUPPLEMENTARY FIGURE

Supplementary Figure 1. The efficacy of XIAP siRNA *in vivo* in high fat induced NAFLD. XIAP gene or protein levels were detected in the liver tissues in 1st, 4th, 8th, and 12th week to determine the efficacy of XIAP siRNA *in vivo*. For all bar plots shown, data are expressed as the mean \pm SEM. n = 8 per group. #p < 0.05 vs. 1st week.
