

SUPPLEMENTARY FIGURE

Supplementary Figure 1. The expression level of miR-15a-3p in HUVECs with different treatments. The scratch HUVECs injury was induced in a 24-well Petri dishes, which were manually scratched with a 10 μ l plastic stylet needle following a 4 \times 4 square grid (with 4-mm space between each line). This scratch injury was regarded as wound group, and untreated cells were used as controls.
