

SUPPLEMENTAL DATA

Supplemental Figure 1. (A, B) Ubiquitous *Sin3A* knockdown (KD II) results in greater sensitivity to paraquat. Survival of control (-RU486) or SIN3 KD II (+RU486) flies on 3 mM paraquat is indicated. (C, D) *Sin3A* knockdown (SIN3 KD II) does not significantly affect survival on 5% sucrose (0 mM paraquat). Error bars standard error of the mean. * p<0.01, ** p<0.001.

Supplemental Figure 2. *Sin3A* knockdown (KD I) does not affect survival on 5% sucrose with or without glutathione supplementation. Survival of control (-RU486), SIN3 KD I or GFP RNAi (+RU486) flies with the addition of 0.22 mM glutathione (+Glut) or no glutathione (-Glut) on 5% sucrose (0 mM paraquat) is indicated. Error bars standard error of the mean. **A** and **B** SIN3 KD I; **C** and **D** GFP RNAi serves as additional control.
