

SUPPLEMENTARY FIGURE

Supplementary Figure 1. IncRNA and mRNA level changes with age and poverty in African American males.

IncRNA and mRNA expression from African American (AA) young and old males living above or below poverty was assessed using microarray (Table 1A for demographic details). Volcano plots show \log_2 fold change and P value for each IncRNA and mRNA. Red indicates IncRNAs and mRNAs that were >2 fold change and $P < 0.05$. Comparisons between groups are indicated.
